

EMPLOYEE ENGAGEMENT SURVEY – SUMMARY REPORT

CodeAlpha Human Resource Management Internship | Task 3

1. INTRODUCTION & METHODOLOGY

This report presents the findings of an Employee Engagement / Satisfaction Survey designed and analyzed as part of the CodeAlpha Human Resource Management internship. The survey was created to measure how employees feel about their work, their managers, recognition, growth opportunities, and overall workplace culture.

The instrument contained **12 questions**: 10 Likert-scale items (1 = Strongly Disagree to 5 = Strongly Agree) and 2 open-ended questions. Responses were collected from a sample of **5 employees**. Although the sample is small, it is sufficient to demonstrate the analysis process and generate practical recommendations suitable for a startup environment.

Data was entered into Excel, averages were calculated for each scale question, and open-ended answers were reviewed for recurring themes. The overall engagement score was derived by averaging the 10 quantitative items.

2. KEY QUANTITATIVE FINDINGS

The overall average engagement score across the 10 scale questions was approximately **3.9 out of 5**. This indicates moderately high engagement with clear room for improvement in specific areas.

Question Theme	Avg	Insight
Meaningfulness of work (Q2)	4.2	Highest – employees feel their work matters
Sense of belonging (Q7)	4.2	Strong team culture and inclusion
Overall satisfaction (Q1 / Q10)	3.8–3.9	Solid baseline, can be strengthened
Manager feedback (Q3)	3.8	Needs more consistency and frequency
Tools & resources (Q4)	3.6	Generally adequate
Career growth (Q6)	3.8	Good but not exceptional
Work-life balance (Q8)	3.8	Respected by most respondents
Leadership communication (Q9)	3.4	Transparency needs improvement
Recognition & appreciation (Q5)	3.0	Lowest score – clear priority area

3. DETAILED INTERPRETATION OF SCORES

The highest-scoring items (meaningfulness of work and sense of belonging) show that employees feel connected to the purpose of their work and to their colleagues. This is a strong foundation for any organization, especially a startup. Protecting team culture and ensuring projects remain purposeful should remain a priority.

Scores around 3.6–3.9 for overall satisfaction, manager feedback, tools, growth, and work-life balance indicate that the basics are in place but are not yet excellent. Small, consistent improvements in these areas can raise the overall engagement level noticeably.

The two lowest areas — recognition (3.0) and leadership communication (3.4) — represent the biggest risks. When employees do not feel appreciated or informed about company direction, motivation and retention can suffer. These two themes also appeared repeatedly in the open-ended comments.

4. QUALITATIVE THEMES FROM OPEN-ENDED RESPONSES

4.1 What employees like most

- Supportive team culture and friendly, helpful colleagues
- Flexible working hours and remote / hybrid options that support work-life balance
- Interesting projects and genuine learning opportunities
- Trust shown by managers and access to good tools

4.2 What employees want the company to improve

- More consistent and visible recognition and appreciation for good work
- Clearer career-path conversations and growth discussions
- More frequent and structured feedback from managers (regular 1:1s)
- Better transparency from leadership about company goals and decisions
- Slightly more competitive compensation (mentioned by one respondent)

5. RECOMMENDATIONS

Based on both the quantitative scores and the open comments, the following practical actions are recommended for a startup or early-stage company:

1. **Launch a simple recognition system** – Introduce monthly peer shout-outs, manager recognition in team meetings, or small non-monetary rewards. This directly targets the lowest score.
2. **Standardize manager feedback** – Ask every manager to hold structured 1:1 meetings at least twice a month and provide brief written notes on progress.
3. **Improve leadership communication** – Share a short monthly update (email or all-hands) covering key wins, priorities, and any major decisions.
4. **Add career-path conversations** – During performance reviews, dedicate time to discuss development interests and possible next steps.
5. **Protect existing strengths** – Continue supporting team culture, flexibility, and meaningful project assignment, as these are clear engagement drivers.

6. IMPLEMENTATION SUGGESTIONS (QUICK WINS)

To make the recommendations actionable without requiring large budgets or long projects, the following quick wins can be started within 30–60 days:

- Create a shared “Wins of the Week” channel or slide where anyone can celebrate colleagues.
- Provide managers with a simple 1:1 template (agenda + notes) so feedback becomes consistent.
- Schedule a 15-minute monthly leadership update and keep it brief and honest.
- Add one development question to the next performance review cycle.
- Re-run a short pulse survey (5 questions) after 3 months to measure progress.

7. LIMITATIONS OF THIS ANALYSIS

The sample size of five employees is small and should be treated as illustrative rather than statistically representative of an entire organization. Results may also be influenced by the specific roles and tenure of the respondents. In a real company setting it is recommended to survey a larger and more diverse group and to segment results by department or tenure where possible.

8. CONCLUSION

The sample group demonstrates a healthy baseline of engagement driven by purpose, team culture, and flexibility. Recognition and leadership communication are the clearest opportunities for improvement. By implementing a few focused, low-cost actions, an organization can raise engagement further, strengthen retention, and create a more motivating environment for employees.

This exercise fulfills the requirements of Task 3: design of a 10–15 question engagement survey, collection and analysis of sample responses from at least five people, and preparation of a summary report with findings and recommendations.

Prepared for CodeAlpha Internship – Human Resource Management Module (Task 3)

Survey designed in Excel-compatible format. Sample of 5 responses analyzed and summarized in this 3-page report.
